a. This category is not used in comparisons because its column proportion is equal to zero or one.
 b. Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
 c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

A14) Have you seen, read or heard anything recently about new electoral boundaries being introduced in Alberta ahead of the next provincial election, which will be held in 2027?

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

A15) The Alberta government recently rejected the boundaries proposed by an independent commission and is forming a new committee of provincial MLAs to develop a new set of boundaries for electoral districts.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

A15)) The Alberta government recently rejected the boundaries proposed by an independent commission and is forming a new committee of provincial MLAs to develop a new set of boundaries for
